

REMARKS

This preliminary amendment is submitted to refer in the specification to the hinge 41' illustrated in Fig. 4. A hinge 41 also is illustrated in Fig. 4. Also several obvious errors or omissions, which are described above, have been made to the drawings. This amendment does not add any new matter that is not illustrated or evident from the specification and drawings as originally filed.

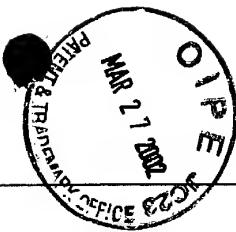

It is believed no additional fee is required for this filing. However, if a fee is required, please charge the fee to Deposit Account No. 18-0988, Order VEIAP103USA.

Respectfully submitted,  
RENNER, OTTO, BOISSELLE & SKLAR, LLP

#### APPENDIX A

Following are marked-up copies of the specification amended above with added material underlined and changes in brackets.

The paragraph beginning at page 12, line 10:

Turning to Fig. 4, 5 and 6 a packaged monitor for showing high-resolution and three-dimensional images and, alternatively, for showing multiple images in parallel, is shown generally at 40. In Fig. 4 the monitor 40 is in closed condition; in Fig. 5 the monitor 40 is in partly open condition; and in Fig. 6 the monitor 40 is in full open condition. The monitor 40 includes a hinge 41 relative to which the displays 12a, 12b, linear polarizers 13a, 13b, and beam splitter 14 are mounted. In Fig. 4 those components are pivoted on or relative to the hinge 41 and to each other to assume a relative compact nested arrangement, e.g., for storage in a minimum space. A protective cover or package 42, including cover portions 42a, 42b, possibly hinged at 41', as is illustrated in Fig. 4, may be placed over those components to avoid damage while in stored condition. Connections 19' may be provided to couple the displays to an image signal source or, if desired, the image signal source may be appropriately mounted in the package 42.

The paragraph beginning at page 15, line 20:

Turning to Fig. 7, a system for implementing the invention is illustrated at

50. The system 50 includes a display 51, such as the monitors 10, 20, 30, 40 described above. The system 50 also includes an image signal source 52 to provide appropriate signals to the display 51 to create images for viewing. The image signal source 52 includes, for example, a computer 53 and an image source 54. The image source 54 contains information or provides information to the computer 53 which supplies signals to the display 51 to create images for viewing. The image source may be, for example, a video source, a tape player, a CD-ROM player, a connection to a network to receive signals from a remote device, or a computer program, for example, which is operable on the computer 53 to develop images, such as for playing a game, for presenting architectural or mechanical drawings, etc. Also associated with the computer 53 are input devices [54] 54a, such as a keyboard, mouse, pointing device, or some other input signal providing mechanism to provide inputs to the computer to operate the same in a desired fashion.
